IPL Skin Tightening / Sun spots Treatment /
Facial Vein Removal / Rosacea Informed Consent

I _____ understand that the Clareon™ IPL is intended for hair reduction, treatment of a variety of pigmented lesions, treatment of vascular lesions on face and skin rejuvenation. Clinical studies have shown that the results may vary in different skin types, ages, areas treated, and genders. I understand that there is a possibility of rare short-term and long-term side effects, which include but are not limited to reddening, mild burning, swelling, temporary unsightly bruising, temporary or permanent discoloration, increased hair growth (very rare), or scarring (rare).

These effects have all been fully explained to me _____ (initial). I am receiving treatment for skin tightening on _____, sun spots/age spots on facial vein/red spots/Rosacea on _____.

I, _____ have been informed by Dr. Inda Mowett, other licensed physician, nurse, physician assistant or qualified staff member of the cost of the treatment, of the treatment modalities, of secondary and unwanted side effects, of potential transient or permanent damage to my skin that may result from this treatment. I understand that, as with any treatment, certain risks are involved and that complications or side effects from known and unknown causes could occur. By signing below, I agree to have this procedure and I freely assume the risks.

I hereby voluntarily consent to treatment with Intense Pulsed Light. The procedure has been explained to me. I have read the above and understand it. I accept the risks and complications of the procedure.

IPL Sun Damage/Vein Removal Post Treatment Instructions

1. Patients should expect that the treatment area will feel warm to touch, as if it has mild sunburn anywhere from 2 to 48 hours after treatment. This is normal and a reflection that the treatment should produce results.
2. Patients should be advised to expect mild redness or swelling around the treatment areas that typically last 2-3 days and is not permanent.
3. Immediately after treatment, patients can apply ice packs or over the counter 1% hydrocortisone cream to reduce the redness and swelling at the treatment area.
4. Although treated areas may be temperature sensitive, patients can bathe and shower as usual, taking care not to take hot showers or scrub or use harsh exfoliants on the treatment area until it heals.
5. Patients should avoid exposing the treated area to the sun, and should wear at least a 30 SPF sun block on the treated area for six weeks after treatment.
6. Patients should avoid waxing, shaving, jacuzzis and excessive exercise for the week following each treatment.
7. If you develop a blister or open sores in the treatment area, apply a topical antibiotic ointment such as Bacitracin to the area and avoid all unnecessary contact with the treated area. Call us at 941-749-0741.
8. Patients should be advised not to pick at or remove any scabbing or skin discolorations, allowing the body to heal itself naturally, without increasing the risk of scarring or infections.
9. Patients should be advised that it is normal for treated lesions to darken and become raised. They will eventually flake off the body within 7 to 10 days, or sooner. This is an expected result of the treatment.
