Informed Consent for Botox/Dysport/Xeomin

Botox (BTX) is made with a purified version of the toxin from botulinum bacteria. In tiny doses, this toxin relaxes the contractions of facial muscles that cause lines and wrinkles. BTX it is a safe aesthetic procedure, improving the appearance of: a) glabella area or frown lines, located between the eyes; b) crow's feet (lateral areas of the eyes); and c) forehead wrinkles. Other areas of the face and neck can be injected with BTX; your injector will discussed them with you. Botox is reconstituted it to a very controlled solution and injected into the muscles with a very fine needle. The procedure is almost painless. Clients may feel a slight burning sensation while the solution is being injected. The procedure takes about 15-20 minutes and the results last 3-4 months. With repeated treatments, the progression of lines and wrinkles will decrease and results may tend to last longer.

RISKS AND COMPLICATIONS

It has been explained to me that there are certain inherent and potential risks and side effects in any medical procedure and, in this specific instance such risks include but are not limited to : 1) Post treatment discomfort, swelling, redness, and bruising, 2) Post treatment bacterial, and/or fungal infection requiring further treatment, 3) Allergic reaction, 4) Minor temporary droop of eyelid(s) in approximately 2% of injections, this usually lasts 2-3 weeks, 5) Occasional numbness of the forehead lasting up to 2-3 weeks, 6) Transient headache, and 7) Flu-like symptoms may occur.

PREGNANCY, ALLERGIES & NEUROLOGIC DISEASE

I am not aware that I am pregnant and I am not trying to get pregnant, I am not lactating (nursing), nor have any significant neurologic disease including but not limited to Myasthenia Gravis, Multiple Sclerosis, Lambert-Eaton Syndrome, Amyotrophic Lateral Sclerosis (ALS), Parkinson's nor have I any allergies to the toxin ingredients, or to human albumin.

RESULTS

I am aware that when small amounts of purified botulinum (BTX) are injected into a muscle it causes relaxation of that muscle. This result appears in 3-5 days (Dysport) and 7 – 14 days (Botox Cosmetic & Xeomin) and usually lasts 3-4 months but can be shorter or longer. In a very small number of individuals, the injection does not work as satisfactorily or for as long as usual. I understand that I will not be able to contract the muscle(s) injected while the medication is active, but that this will reverse after a period of months at which time re-treatment is appropriate. I understand that I must stay in the erect posture and that I must not manipulate the area of the injection for the 2 hours post-injection period. Some individuals will require touch up 14 days after treatment. Client will be charged for additional units of BTX if necessary.

I hereby voluntarily consent to treatment with BTX injection for the condition known as "Hyperdynamic Wrinkles". The procedure has been explained to me. I have read the above and understand it. My questions have been answered satisfactorily. I accept the risks and complications of the procedure. I certify that if I have any changes occur in my medical history I will notify the office.

POST - TREATMENT INSTRUCTIONS BOTOX / DYSPORT

- Makeup can be applied before leaving the office.
- No straining, heavy lifting, vigorous exercise for 2-3 hours following treatment. It is now known that it takes the toxin approximately 2 hours to bind itself to the nerve to start its work, and we do not want to increase circulation to the injected areas to wash away the BTX.
- Do not lay down for 4 hours following the treatment.
- A broad spectrum UVA/UVB sun block SPF 30 or greater should be applied to the areas treated, whenever exposed to the sun.
- Avoid touching area for 3 hours following treatment (for the same reasons listed above.) Avoid doing a facial, peel, or microdermabrasion after treatment. You should wait up to 2 weeks before any of these treatments are done. A facial, peel, or microdermabrasion can be done in the same appointment only if they are done 2 hours before the BTA.
- Facial exercises of the injected areas is recommended for 1-hour following treatment, to stimulate the binding of the BTA to the muscles and nerves.
- It can take 7-14 days to take full effect. It is recommended that you wait 2 weeks before re-treating the areas. Please contact our office in 2 weeks if desired effect was not achieved or sooner if you are having any problems.
- Avoid applying Retin-A, any skin care products with acids or vitamin C for up to 24 hrs. after treatment.

I certify that I have been counseled in post treatment instructions and have received a copy of the post treatment instructions as well.
